JOURNAL OF STEEL CASTINGS RESEARCH INDEX

Key to index—Number before colon = Journal No.; Number after colon = Page No.

(Journal No.):(Page No.)

A

Abrasives
- cast steel ... 3:14
- cut wire ... 3:14
- foundry tests ... 3:13-14
- laboratory tests ... 3:13-14
- sand contamination ... 24:13-14
  - impeller blade wear rates ... 24:13-14
    - chilled iron ... 24:14
    - Mechanite ... 24:14
    - Ni-hard ... 24:14
    - 20 percent Cr iron ... 24:14
- testing breakdown equipment ... 16:14

Additives
- bentonite slurries
  - aluminum hydroxide ... 34:10-11
  - boric acid ... 34:10-11
  - quebracho ... 34:10-11
  - sodium hydroxide ... 34:10-11
- core sand ... 35:12-13
- molding sand ... 35:9-11

Alumina Colloidal ... 31:13
- bonded sands ... 31:13

Aluminum
- acid soluble in steel ... 5:12-13
- castings ... 5:12-13
- deoxidizer of steel ... 33:1-5
- nitrides ... 33:4-5
  - decomposition of ... 33:5
  - occurrence in steel ... 33:4-5

Aluminum Nitride ... 5:11
- effect on ductility ... 13:1
- effect on intergranular ester-halogen separation ... 5:11
- etching determination ... 5:11
- fracture ... 5:10-14, 9:12-13, 10:7-8
- solubility ... 5:11

B

Basic Open Hearth Furnace ... 37:9-10

Basic Oxygen Furnace ... 37:9-10

Bed, fluidized ... 32:1

Bentonite
- active determination ... 27:7-11, 12:14-16
  - calibration curve ... 27:9-10
  - effect of elements ... 27:8
  - equipment ... 27:9-10
  - photometric ... 12:14-16
  - procedure ... 27:9-10
  - reagents ... 27:9-10
- composition ... 28:6
- effect of adsorbed water films ... 25:2
- exchange capacity ... 8:6
- ion adsorption ... 27:7-8
- properties
  - base exchange ... 25:1
    - deflocculation ... 25:1-2
    - determination ... 25:2-3
    - mechanism ... 25:1
  - chemical requirements in molding ... 8:7

(Journal No.):(Page No.)

- effect of electrolytes
  - anions ... 25:2-5
  - base exchange capacity ... 25:2
  - cations ... 25:2-4
  - determination ... 25:2
  - liquid limit ... 25:4-5
- physical due to mining
  - location ... 8:5
  - viscosity ... 8:6
- sand bonding ... 27:7
- specification ... 8:7
  - southern and western ... 8:4-7
- tests ... 28:6-11
  - active content ... 28:6-8
  - application ... 8:4-5
  - liquid limit ... 28:6-7
  - methylene blue index ... 28:6-7-11
  - soluble sodium ... 28:10

Binders
- air setting ... 18:5-10-12
  - advantages ... 18:5, 28:15
  - applications ... 18:9-10, 28:14
  - costs ... 18:10
  - facing sands ... 18:9-10
    - mold spray ... 18:9-10, 28:14
  - baked properties ... 18:8-9
  - bench life ... 18:7-8
  - collapsibility ... 29:13-14
  - compression strength
    - effect of standing time ... 18:6-7
    - setting rates ... 18:6
  - curing ... 28:14, 29:11-12
  - disadvantages ... 28:15-16
- air setting
  - effect of
    - air gassing ... 18:7
    - clay ... 18:6
      - ball clay ... 18:6-7
      - bentonite ... 18:6-7
    - moisture ... 18:6
    - natural sand ... 18:7
    - sand fineness ... 29:13
  - flowability ... 28:14
  - fluidity ... 18:10
  - gas evolution ... 18:8-9, 29:12-13
  - linseed oil ... 18:5-10
  - oils ... 18:5-10
    - accelerators ... 18:6-8, 29:13
      - sodium perborate ... 18:6
    - green strength ... 18:6-7
    - hardening ... 18:5-7
  - peel ... 18:10
  - phosphates ... 18:5
  - Portland cement ... 18:5
  - sodium silicate ... 18:5
  - surface finish ... 18:10
- clay distribution
  - effect of:
    - high clay content ... 16:5
    - reused sand ... 16:5
    - water ... 16:4-5
- colloidal silica ... 27:15
- core sagging ... 18:12
  - test ... 18:12
- dextrin
  - moisture absorption ... 11:12-13
  - storage ... 11:12
- fayalite ... 27:15
- inorganic ... 19:14-16
  - effect on porosity ... 19:14
  - sodium hexametaphosphate ... 19:14-16
    - baked strength ... 19:14-15

(Journal No.):(Page No.)

  - effect of:
    - kaolin ... 19:15
    - zirconium oxide ... 19:15
  - green strength ... 19:15
  - hot strength ... 19:15
  - retained strength ... 19:15
  - workability ... 19:15
- microscopic study ... 16:1-7
- bentonite ... 16:2, 3, 5-7
  - film thickness ... 16:3, 6, 7
- effect of mulling ... 16:3
  - adhesion ... 16:3
  - cohesion ... 16:3
  - dry strength ... 16:3
  - green strength ... 16:3
- fire clay ... 16:5
- magnifications ... 16:1
- reclaimed sand ... 16:2-3
- organic
  - gas volume ... 24:7
    - linseed oil ... 24:7,8
    - phenol formaldehyde ... 24:8,9
    - starch ... 24:8,9
    - urea formaldehyde ... 24:8,9
  - gas transpiration ... 24:10
  - generated gas pressure ... 24:7-10
    - maximum ... 24:9
  - shell molding ... 18:12-15
    - additives
      - lead dioxide ... 18:12
      - manganese dioxide ... 18:12
    - gas evolution ... 18:12,13
    - melamine ... 18:12
    - phenol-formaldehyde ... 18:12
    - urea formaldehyde ... 18:12
  - starch
    - moisture absorption ... 11:12-13
    - storage ... 11:12
  - synthetic resins ... 28:14-16
    - advantages ... 28:15
    - disadvantages ... 28:15-16
    - furfuryl alcohol ... 28:14-15
      - accelerators ... 28:15
    - gas evolution ... 28:15
    - hardening ... 28:14
  - water soluble cellulose ethers ... 11:10-14
    - addition of resin ... 11:11
      - gas content ... 11:12-13
      - melamine ... 11:11
      - properties ... 11:11-12
      - substitute for cereal ... 11:12
      - urea-formaldehyde ... 11:11
    - advantages ... 11:13
    - collapsibility ... 11:13
    - disadvantages ... 11:11
    - effect of moisture ... 11:12-13
    - oil sand
      - green strength ... 11:13
    - processing

Blowholes
- formation by
  - CO ... 15:9
  - deoxidation ... 15:9
  - hydrogen and nitrogen ... 15:9-10
- gases in
  - composition ... 15:9
  - identification ... 15:9

Boric Acid ... 33:12
